

Proven Results

Who are we?

MDBiologix is an industry leader in regenerative medicine that is bringing advanced, life-changing therapies to patients.

Thanks to our revolutionary technology, MDBiologix can help you become the best version of yourself!

What is Regenerative Medicine?

Regenerative Medicine is a form of treatment that harnesses the healing power of human cells or tissues to accelerate the recovery of a wide variety of medical conditions.

What is PRP?

Platelet Rich Plasma therapy is a safe, innovative, and minimally invasive approach to regenerative medicine that uses your body's own cells to enhance and accelerate the healing process.

How can I get started with PRP?

Contact your clinician for more information on PRP therapy for Skin Rejuvenation

Platelet-Rich Plasma for Skin Rejuvenation

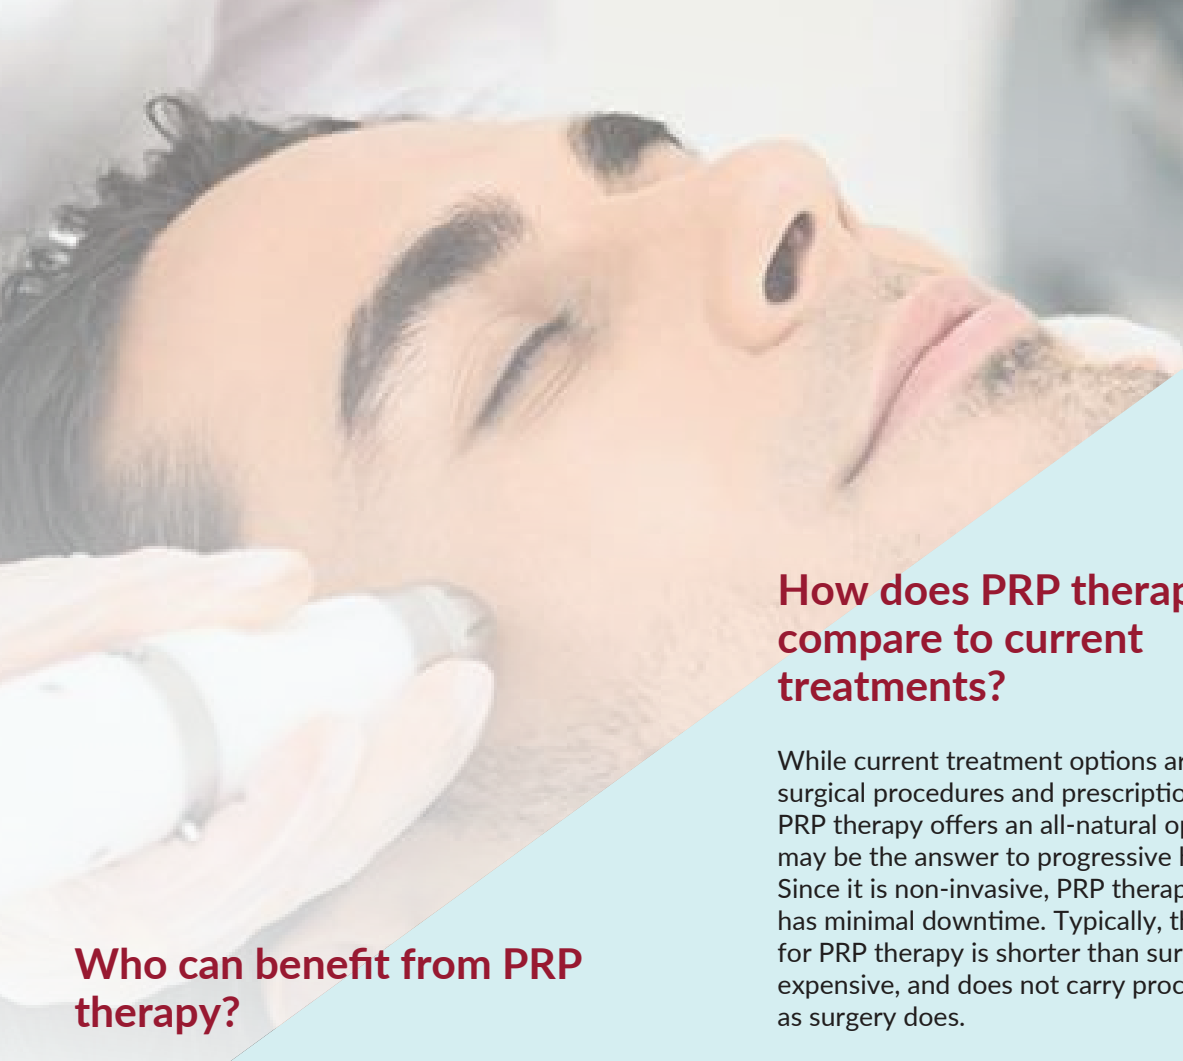

An all-natural alternative for Skin Care

Who can benefit from PRP therapy?

PRP therapy for skin rejuvenation is a great option for men and women of all ages who are looking for an effective and all-natural approach to skincare. By harnessing the healing power from our very own cells, PRP therapy can help address:

- Acne Scarring and Rosacea
- Fine lines and wrinkles
- Uneven and dull skin tone
- Hyperpigmentation issues
- Breast and neck lift

How does PRP therapy compare to current treatments?

While current treatment options are limited to surgical procedures and prescription drugs, PRP therapy offers an all-natural option that may be the answer to progressive hair loss. Since it is non-invasive, PRP therapy reduces or has minimal downtime. Typically, the wait time for PRP therapy is shorter than surgery, is less expensive, and does not carry procedural risks as surgery does.

How long does the procedure take?

The procedure takes up to an hour from beginning to completion. This includes drawing the patient's blood, preparing the PRP in the Harvest SmartPrep system, and treating the affected area.

Why use Harvest PRP over others?

Harvest PRP delivers the optimal concentration of platelets to accelerate the healing process^{1,2}. Many other PRP products do not deliver enough platelets and growth factors at high enough concentrations to elicit a strong healing response. Our highly concentrated PRP may:

- Tighten skin by stimulating collagen and elastin production
 - Improve overall skin texture and tone
 - Reduce the signs of aging skin
